## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Skog et al. (6,290,687).

Skog discloses a method of dynamically pre-fastening disposable articles having a slot-and-tab fastening system as the articles are driven forward at a relatively high velocity along a predetermined path; the method comprising the steps of; providing a disposable absorbent article being folded longitudinally into a bi-fold configuration (Fig. 1); inserting at least a portion of a tab member (Fig. 6; via outwardly projecting portion 46 and 47) of the slot-and-tab fastening system (Fig. 6; via system 38) through a slot (Fig. 6; via apertures 44) of the slot-and-tab fastening system by positioning the slot member with a slot locator and by guiding the tab member with a guiding rail (Fig. 6; via walls 42 and 43 guide the tabs 46 and 47 to slots 44) and a folding board (Fig. 6; via the bottom plate 41 can be consider as folding board, because it folds or bent the tabs in its way to the slots 44); while holding the portion of the tab member being inserted through the slot, moving the slot member of the article opposite to the direction of insertion of the portion of the tab member until the slot of the slot member passes, beyond a lip portion of the tab member to effect a complete insertion of the tab member though the slot member and to effect a closed configuration of the slot-and tab fastening system forming a pre-

fastened disposable absorbent article, see for example (Figs. 1 and 6) it is obvious that in order to ensure complete fastening for the absorbent article as shown in Fig. 1, both of the tab and slot member as shown in Fig. 6 have to move in apposite direction in order to effect a closed configuration of the slot and tab fastening system 38.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kline et al 6432098 discloses an absorbent article fastening device.
